

1. Convert from slope-intercept form to standard form. Use two steps (or less).

(a)	$y = \frac{1}{2}x - 4$	$\longrightarrow$	$-\frac{1}{2}x + y = -4$	$\longrightarrow$	$x - 2y = 8$
			_____		_____
(b)	$y = 3x + 1$	$\longrightarrow$		$\longrightarrow$	
			_____		_____
(c)	$y = -\frac{2}{3}x - 2$	$\longrightarrow$		$\longrightarrow$	
			_____		_____
(d)	$y = \frac{7}{3}x + \frac{4}{3}$	$\longrightarrow$		$\longrightarrow$	
			_____		_____
(e)	$y = 4x + \frac{9}{4}$	$\longrightarrow$		$\longrightarrow$	
			_____		_____
(f)	$y = -\frac{11}{5}x + \frac{6}{5}$	$\longrightarrow$		$\longrightarrow$	
			_____		_____
(g)	$y = -\frac{3}{8}x + \frac{1}{4}$	$\longrightarrow$		$\longrightarrow$	
			_____		_____
(h)	$y = \frac{3}{5}x - \frac{5}{3}$	$\longrightarrow$		$\longrightarrow$	
			_____		_____

2. Convert from standard form to slope-intercept form. Use two steps (or less).

(a)	$x - 4y = 2$	$\longrightarrow$	$-4y = -x + 2$	$\longrightarrow$	$y = \frac{1}{4}x - \frac{1}{2}$
			_____		_____
(b)	$2x - y = 1$	$\longrightarrow$		$\longrightarrow$	
			_____		_____
(c)	$3x + 4y = 5$	$\longrightarrow$		$\longrightarrow$	
			_____		_____
(d)	$2x - 7y = -14$	$\longrightarrow$		$\longrightarrow$	
			_____		_____
(e)	$3x - 5y = 10$	$\longrightarrow$		$\longrightarrow$	
			_____		_____
(f)	$7x + y = -3$	$\longrightarrow$		$\longrightarrow$	
			_____		_____
(g)	$x + 5y = 2$	$\longrightarrow$		$\longrightarrow$	
			_____		_____
(h)	$6x - 4y = 12$	$\longrightarrow$		$\longrightarrow$	
			_____		_____
