

The Increment and Decrement Operators

- ++ is the increment operator.

It adds one to a variable.

```
val++; is the same as val = val + 1;
```

- ++ can be used before (prefix) or after (postfix) a variable:

```
++val;    val++;
```

Addison-Wesley
3rd printing of
PEARSON
Copyright © 2015, 2012, 2009 Pearson Education, Inc., Publishing as Addison-Wesley. All rights reserved.

The Increment and Decrement Operators

- -- is the decrement operator.

It subtracts one from a variable.

```
val--; is the same as val = val - 1;
```

- -- can be also used before (prefix) or after (postfix) a variable:

```
--val;    val--;
```

Increment and Decrement Operators in Program 5-1

```

Program 5-1
1 // This program demonstrates the ++ and -- operators.
2 #include <iostream>
3 using namespace std;
4
5 int main()
6 {
7     int num = 4; // num starts out with 4.
8
9     // Display the value in num.
10    cout << "The variable num is " << num << endl;
11    cout << "I will now increment num.\n\n";
12
13    // Use postfix ++ to increment num.
14    num++;
15    cout << "Now the variable num is " << num << endl;
16    cout << "I will increment num again.\n\n";
17
18    // Use prefix ++ to increment num.
19    ++num;
20    cout << "Now the variable num is " << num << endl;
21    cout << "I will now decrement num.\n\n";
22
23    // Use postfix -- to decrement num.
24    num--;
25    cout << "Now the variable num is " << num << endl;
26    cout << "I will decrement num again.\n\n";
27

```

Increment and Decrement Operators in Program 5-1

```

Program 5-1 (continued)
28 // Use prefix -- to increment num.
29 --num;
30 cout << "Now the variable num is " << num << endl;
31 return 0;
32 }

```

Program Output

```

The variable num is 4
I will now increment num.
Now the variable num is 5
I will increment num again.
Now the variable num is 6
I will now decrement num.
Now the variable num is 5
I will decrement num again.
Now the variable num is 4

```

Addison-Wesley
3rd printing of
PEARSON
Copyright © 2015, 2012, 2009 Pearson Education, Inc., Publishing as Addison-Wesley. All rights reserved.

Prefix vs. Postfix

- ++ and -- operators can be used in complex statements and expressions
- In prefix mode (++val, --val) the operator increments or decrements, then returns the value of the variable
- In postfix mode (val++, val--) the operator returns the value of the variable, then increments or decrements

Addison-Wesley
3rd printing of
PEARSON
Copyright © 2015, 2012, 2009 Pearson Education, Inc., Publishing as Addison-Wesley. All rights reserved.

Prefix vs. Postfix - Examples

```
int num, val = 12;
cout << val++; // displays 12,
               // val is now 13;
cout << ++val; // sets val to 14,
               // then displays it
num = --val;   // sets val to 13,
               // stores 13 in num
num = val--;   // stores 13 in num,
               // sets val to 12
```

Addison-Wesley
an imprint of
PEARSON

Copyright © 2015, 2012, 2009 Pearson Education, Inc., Publishing as Addison-Wesley All rights reserved.

Notes on Increment and Decrement

- Can be used in expressions:
`result = num1++ + --num2;`
- Must be applied to something that has a location in memory. Cannot have:
`result = (num1 + num2)++;`
- Can be used in relational expressions:
`if (++num > limit)`
 pre- and post-operations will cause different comparisons

Introduction to Loops: The while Loop

Addison-Wesley
an imprint of
PEARSON

Copyright © 2015, 2012, 2009 Pearson Education, Inc., Publishing as Addison-Wesley All rights reserved.

Introduction to Loops: The while Loop

- Loop:** a control structure that causes a statement or statements to repeat
- General format of the while loop:
`while (expression)
 statement;`
- `statement;` can also be a block of statements enclosed in { }

Addison-Wesley
an imprint of
PEARSON

Copyright © 2015, 2012, 2009 Pearson Education, Inc., Publishing as Addison-Wesley All rights reserved.

The while Loop – How It Works

```
while (expression)  

    statement;
```

- `expression` is evaluated
- if true, then `statement` is executed, and `expression` is evaluated again
- if false, then the loop is finished and program statements following `statement` execute

The while loop in Program 5-3

Program 5-3

```

1 // This program demonstrates a simple while loop.
2 #include <iostream>
3 using namespace std;
4
5 int main()
6 {
7     int number = 1;
8
9     while (number <= 5)
10    {
11        cout << "Hello\n";
12        number++;
13    }
14    cout << "That's all!\n";
15    return 0;
16 }

```

Program Output

```

Hello
Hello
Hello
Hello
Hello
That's all!

```

How the while Loop in Program 5-3 Lines 9 through 13 Works

Addison-Wesley
Learning Technology

PEARSON

Copyright © 2015, 2012, 2009 Pearson Education, Inc., Publishing as Addison-Wesley. All rights reserved.

Flowchart of the while Loop in Program 5-3

Addison-Wesley
Learning Technology

PEARSON

Copyright © 2015, 2012, 2009 Pearson Education, Inc., Publishing as Addison-Wesley. All rights reserved.

The while Loop is a Pretest Loop

expression is evaluated *before* the loop executes. The following loop will never execute:

```

int number = 6;
while (number <= 5)
{
    cout << "Hello\n";
    number++;
}

```

Addison-Wesley
Learning Technology

PEARSON

Copyright © 2015, 2012, 2009 Pearson Education, Inc., Publishing as Addison-Wesley. All rights reserved.

Watch Out for Infinite Loops

- The loop must contain code to make *expression* become false
- Otherwise, the loop will have no way of stopping
- Such a loop is called an *infinite loop*, because it will repeat an infinite number of times

Addison-Wesley
Learning Technology

PEARSON

Copyright © 2015, 2012, 2009 Pearson Education, Inc., Publishing as Addison-Wesley. All rights reserved.

Example of an Infinite Loop

```

int number = 1;
while (number <= 5)
{
    cout << "Hello\n";
}

```

5.3

Using the `while` Loop for Input Validation

Addison-Wesley
an imprint of
PEARSON

Copyright © 2015, 2012, 2009 Pearson Education, Inc., Publishing as Addison-Wesley. All rights reserved.

Using the `while` Loop for Input Validation

- Input validation is the process of inspecting data that is given to the program as input and determining whether it is valid.
- The `while` loop can be used to create input routines that reject invalid data, and repeat until valid data is entered.

Addison-Wesley
an imprint of
PEARSON

Copyright © 2015, 2012, 2009 Pearson Education, Inc., Publishing as Addison-Wesley. All rights reserved.

Using the `while` Loop for Input Validation

- Here's the general approach, in pseudocode:

```

Read an item of input.
While the input is invalid
    Display an error message.
    Read the input again.
End While
  
```

Addison-Wesley
an imprint of
PEARSON

Copyright © 2015, 2012, 2009 Pearson Education, Inc., Publishing as Addison-Wesley. All rights reserved.

Input Validation Example

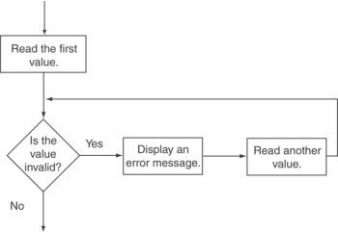

```

cout << "Enter a number less than 10: ";
cin >> number;
while (number >= 10)
{
    cout << "Invalid Entry!"
        << "Enter a number less than 10: ";
    cin >> number;
}
  
```

Addison-Wesley
an imprint of
PEARSON

Copyright © 2015, 2012, 2009 Pearson Education, Inc., Publishing as Addison-Wesley. All rights reserved.

Flowchart for Input Validation

```

graph TD
    Start([Start]) --> Read[Read the first value.]
    Read --> Invalid{Is the value invalid?}
    Invalid -- Yes --> Error[Display an error message.]
    Error --> Read2[Read another value.]
    Read2 --> Invalid
    Invalid -- No --> End([End])
  
```

Addison-Wesley
an imprint of
PEARSON

Copyright © 2015, 2012, 2009 Pearson Education, Inc., Publishing as Addison-Wesley. All rights reserved.

Input Validation in Program 5-5

```

20 // Get the number of players per team.
21 cout << "How many players do you wish per team? ";
22 cin >> teamPlayers;
23
24 // Validate the input.
25 while (teamPlayers < MIN_PLAYERS || teamPlayers > MAX_PLAYERS)
26 {
27     // Explain the error.
28     cout << "You should have at least " << MIN_PLAYERS
29         << " but no more than " << MAX_PLAYERS << " per team.\n";
30
31     // Get the input again.
32     cout << "How many players do you wish per team? ";
33     cin >> teamPlayers;
34 }
35
36 // Get the number of players available.
37 cout << "How many players are available? ";
38 cin >> players;
39
40 // Validate the input.
41 while (players <= 0)
42 {
43     // Get the input again.
44     cout << "Please enter 0 or greater: ";
45     cin >> players;
46 }
  
```

Addison-Wesley
an imprint of
PEARSON

5.4

Counters

Addison-Wesley
PEARSON

Copyright © 2015, 2012, 2009 Pearson Education, Inc., Publishing as Addison-Wesley All rights reserved.

Counters

- Counter: a variable that is incremented or decremented each time a loop repeats
- Can be used to control execution of the loop (also known as the *loop control variable*)
- Must be initialized before entering loop

Addison-Wesley
PEARSON

Copyright © 2015, 2012, 2009 Pearson Education, Inc., Publishing as Addison-Wesley All rights reserved.

A Counter Variable Controls the Loop in Program 5-6

Program 5-6

```

1 // This program displays a list of numbers and
2 // their squares.
3 #include <iostream>
4 using namespace std;
5
6 int main()
7 {
8     const int MIN_NUMBER = 1, // Starting number to square
9           MAX_NUMBER = 10; // Maximum number to square
10
11     int num = MIN_NUMBER; // Counter
12
13     cout << "Number Number Squared\n";
14     cout << "-----\n";

```

Continued...

Addison-Wesley
PEARSON

Copyright © 2015, 2012, 2009 Pearson Education, Inc., Publishing as Addison-Wesley All rights reserved.

A Counter Variable Controls the Loop in Program 5-6

```

15     while (num <= MAX_NUMBER)
16     {
17         cout << num << "\t\t" << (num * num) << endl;
18         num++; //Increment the counter.
19     }
20     return 0;
21 }

```

Program Output

Number	Number Squared
1	1
2	4
3	9
4	16
5	25
6	36
7	49
8	64
9	81
10	100

5.5

The do-while Loop

Addison-Wesley
PEARSON

Copyright © 2015, 2012, 2009 Pearson Education, Inc., Publishing as Addison-Wesley All rights reserved.

The do-while Loop

- do-while: a posttest loop – execute the loop, then test the expression
- General Format:

```

do
    statement; // or block in { }
while (expression);

```
- Note that a semicolon is required after (*expression*)

Addison-Wesley
PEARSON

Copyright © 2015, 2012, 2009 Pearson Education, Inc., Publishing as Addison-Wesley All rights reserved.

The Logic of a do-while Loop

Addison-Wesley
Learning Technology

PEARSON

Copyright © 2015, 2012, 2009 Pearson Education, Inc., Publishing as Addison-Wesley. All rights reserved.

An Example do-while Loop

```

int x = 1;
do
{
    cout << x << endl;
} while(x < 0);
  
```

Although the test expression is false, this loop will execute one time because do-while is a posttest loop.

Addison-Wesley
Learning Technology

PEARSON

Copyright © 2015, 2012, 2009 Pearson Education, Inc., Publishing as Addison-Wesley. All rights reserved.

A do-while Loop in Program 5-7

Program 5-7

```

1 // This program averages 3 test scores. It repeats as
2 // many times as the user wishes.
3 #include <iostream>
4 using namespace std;
5
6 int main()
7 {
8     int score1, score2, score3; // Three scores
9     double average; // Average score
10    char again; // To hold Y or N input
11
12    do
13    {
14        // Get three scores.
15        cout << "Enter 3 scores and I will average them: ";
16        cin >> score1 >> score2 >> score3;
17
18        // Calculate and display the average.
19        average = (score1 + score2 + score3) / 3.0;
20        cout << "The average is " << average << ".\n";
21
22        // Does the user want to average another set?
23        cout << "Do you want to average another set? (Y/N) ";
24        cin >> again;
25    } while (again == 'Y' || again == 'y');
26    return 0;
27 }
  
```

Continued...

Addison-Wesley
Learning Technology

PEARSON

Copyright © 2015, 2012, 2009 Pearson Education, Inc., Publishing as Addison-Wesley. All rights reserved.

A do-while Loop in Program 5-7

Program Output with Example Input Shown in Bold

```

Enter 3 scores and I will average them: 80 90 70 [Enter]
The average is 80.
Do you want to average another set? (Y/N) y [Enter]
Enter 3 scores and I will average them: 60 75 88 [Enter]
The average is 74.3333.
Do you want to average another set? (Y/N) n [Enter]
  
```

Addison-Wesley
Learning Technology

PEARSON

Copyright © 2015, 2012, 2009 Pearson Education, Inc., Publishing as Addison-Wesley. All rights reserved.

do-while Loop Notes

- Loop always executes at least once
- Execution continues as long as *expression* is true, stops repetition when *expression* becomes false
- Useful in menu-driven programs to bring user back to menu to make another choice (see Program 5-8 on pages 245-246)

5.6

The for Loop

Addison-Wesley
Learning Technology

PEARSON

Copyright © 2015, 2012, 2009 Pearson Education, Inc., Publishing as Addison-Wesley. All rights reserved.

The for Loop

- Useful for counter-controlled loop

- General Format:

```
for(initialization; test; update)
    statement; // or block in { }
```

- No semicolon after the update expression or after the)

Addison-Wesley
Learning Technology

PEARSON

Copyright © 2015, 2012, 2009 Pearson Education, Inc., Publishing as Addison-Wesley All rights reserved.

for Loop - Mechanics

```
for(initialization; test; update)
    statement; // or block in { }
```

- Perform *initialization*
- Evaluate *test* expression
 - If true, execute *statement*
 - If false, terminate loop execution
- Execute *update*, then re-evaluate *test* expression

Addison-Wesley
Learning Technology

PEARSON

Copyright © 2015, 2012, 2009 Pearson Education, Inc., Publishing as Addison-Wesley All rights reserved.

for Loop - Example

```
int count;

for (count = 1; count <= 5; count++)
    cout << "Hello" << endl;
```

When to Use the for Loop

- In any situation that clearly requires
 - an initialization
 - a false condition to stop the loop
 - an update to occur at the end of each iteration

Addison-Wesley

3rd printing of

PEARSON

Copyright © 2015, 2012, 2009 Pearson Education, Inc., Publishing as Addison-Wesley. All rights reserved.

The for Loop is a Pretest Loop

- The for loop tests its test expression before each iteration, so it is a pretest loop.
- The following loop will never iterate:

```
for (count = 11; count <= 10; count++)
    cout << "Hello" << endl;
```

Addison-Wesley

3rd printing of

PEARSON

Copyright © 2015, 2012, 2009 Pearson Education, Inc., Publishing as Addison-Wesley. All rights reserved.

for Loop - Modifications

- You can have multiple statements in the *initialization* expression. Separate the statements with a comma:

```
int x, y;
for (x=1, y=1; x <= 5; x++)
{
    cout << x << " plus " << y
        << " equals " << (x+y)
        << endl;
}
```

Initialization Expression

Addison-Wesley

3rd printing of

PEARSON

Copyright © 2015, 2012, 2009 Pearson Education, Inc., Publishing as Addison-Wesley. All rights reserved.

for Loop - Modifications

- You can also have multiple statements in the *test* expression. Separate the statements with a comma:

```
int x, y;
for (x=1, y=1; x <= 5; x++, y++)
{
    cout << x << " plus " << y
        << " equals " << (x+y)
        << endl;
}
```

Test Expression
↙

Addison-Wesley
is an imprint of
PEARSON

Copyright © 2015, 2012, 2009 Pearson Education, Inc., Publishing as Addison-Wesley. All rights reserved.

for Loop - Modifications

- You can omit the *initialization* expression if it has already been done:

```
int sum = 0, num = 1;
for (; num <= 10; num++)
    sum += num;
```

Addison-Wesley
is an imprint of
PEARSON

Copyright © 2015, 2012, 2009 Pearson Education, Inc., Publishing as Addison-Wesley. All rights reserved.

for Loop - Modifications

- You can declare variables in the *initialization* expression:

```
int sum = 0;
for (int num = 0; num <= 10;
    num++)
    sum += num;
```

The scope of the variable `num` is the `for` loop.

Sentinels

Addison-Wesley
Learning to Code
PEARSON

Copyright © 2015, 2012, 2009 Pearson Education, Inc., Publishing as Addison-Wesley All rights reserved.

Sentinels

- **sentinel**: value in a list of values that indicates end of data
- Special value that cannot be confused with a valid value, e.g., -999 for a test score
- Used to terminate input when user may not know how many values will be entered

A Sentinel in Program 5-13

Program 5-13

```

1 // This program calculates the total number of points a
2 // soccer team has earned over a series of games. The user
3 // enters a series of point values, then -1 when finished.
4 #include <iostream>
5 using namespace std;
6
7 int main()
8 {
9     int game = 1; // Game counter
10    int points;  // To hold a number of points
11    int total = 0; // Accumulator
12
13    cout << "Enter the number of points your team has earned!\n";
14    cout << "so far in the season, then enter -1 when finished.\n\n";
15    cout << "Enter the points for game " << game << " ";
16    cin >> points;
17
18    while (points != -1)
19    {
20        total += points;
21        game++;
22        cout << "Enter the points for game " << game << " ";
23        cin >> points;
24    }
25    cout << "\nThe total points are " << total << endl;
26    return 0;
27 }

```

Deciding Which Loop to Use

Addison-Wesley
3rd Edition
PEARSON

Copyright © 2015, 2012, 2009 Pearson Education, Inc., Publishing as Addison-Wesley. All rights reserved.

Deciding Which Loop to Use

- The `while` loop is a conditional pretest loop
 - Iterates as long as a certain condition exits
 - Validating input
 - Reading lists of data terminated by a sentinel
- The `do-while` loop is a conditional posttest loop
 - Always iterates at least once
 - Repeating a menu
- The `for` loop is a pretest loop
 - Built-in expressions for initializing, testing, and updating
 - Situations where the exact number of iterations is known

Nested Loops

Addison-Wesley
3rd Edition
PEARSON

Copyright © 2015, 2012, 2009 Pearson Education, Inc., Publishing as Addison-Wesley. All rights reserved.

Nested Loops

- A nested loop is a loop inside the body of another loop
- Inner (inside), outer (outside) loops:

```
for (row=1; row<=3; row++) //outer
  for (col=1; col<=3; col++)//inner
    cout << row * col << endl;
```

Addison-Wesley
3rd Edition

Nested `for` Loop in Program 5-14

```

26 // Determine each student's average score.
27 for (int student = 1; student <= numStudents; student++)
28 {
29     total = 0; // Initialize the accumulator.
30     for (int test = 1; test <= numTests; test++)
31     {
32         double score;
33         cout << "Enter score " << test << " for ";
34         cout << "student " << student << ": ";
35         cin >> score;
36         total += score;
37     }
38     average = total / numTests;
39     cout << "The average score for student " << student;
40     cout << " is " << average << ".\n\n";
41 }

```

Nested Loops - Notes

- Inner loop goes through all repetitions for each repetition of outer loop
- Inner loop repetitions complete sooner than outer loop
- Total number of repetitions for inner loop is product of number of repetitions of the two loops.

5.11

Using Files for Data Storage

Addison-Wesley
is an imprint of
PEARSON

Copyright © 2015, 2012, 2009 Pearson Education, Inc., Publishing as Addison-Wesley. All rights reserved.

Using Files for Data Storage

- Can use files instead of keyboard, monitor screen for program input, output
- Allows data to be retained between program runs
- Steps:
 - Open the file
 - Use the file (read from, write to, or both)
 - Close the file

Addison-Wesley
is an imprint of
PEARSON

Copyright © 2015, 2012, 2009 Pearson Education, Inc., Publishing as Addison-Wesley. All rights reserved.

Files: What is Needed

- Use `fstream` header file for file access
- File stream types:
 - `ifstream` for input from a file
 - `ofstream` for output to a file
 - `fstream` for input from or output to a file
- Define file stream objects:

```
ifstream infile;
ofstream outfile;
```

Addison-Wesley
is an imprint of
PEARSON

Copyright © 2015, 2012, 2009 Pearson Education, Inc., Publishing as Addison-Wesley. All rights reserved.

Opening Files

- Create a link between file name (outside the program) and file stream object (inside the program)
- Use the `open` member function:

```
infile.open("inventory.dat");
outfile.open("report.txt");
```
- Filename may include drive, path info.
- Output file will be created if necessary; existing file will be erased first
- Input file must exist for `open` to work

Addison-Wesley
is an imprint of
PEARSON

Copyright © 2015, 2012, 2009 Pearson Education, Inc., Publishing as Addison-Wesley. All rights reserved.

Testing for File Open Errors

- Can test a file stream object to detect if an open operation failed:

```
infile.open("test.txt");
if (!infile)
{
    cout << "File open failure!";
}
```
- Can also use the `fail` member function

Addison-Wesley
is an imprint of
PEARSON

Copyright © 2015, 2012, 2009 Pearson Education, Inc., Publishing as Addison-Wesley. All rights reserved.

Using Files

- Can use output file object and `<<` to send data to a file:

```
outfile << "Inventory report";
```
- Can use input file object and `>>` to copy data from file to variables:

```
infile >> partNum;
infile >> qtyInStock >>
qtyOnOrder;
```

Addison-Wesley
is an imprint of
PEARSON

Copyright © 2015, 2012, 2009 Pearson Education, Inc., Publishing as Addison-Wesley. All rights reserved.

Using Loops to Process Files

- The stream extraction operator `>>` returns `true` when a value was successfully read, `false` otherwise
- Can be tested in a `while` loop to continue execution as long as values are read from the file:

```
while (inputFile >> number) ...
```

Addison-Wesley
Learning Technology

PEARSON

Copyright © 2015, 2012, 2009 Pearson Education, Inc., Publishing as Addison-Wesley. All rights reserved.

Closing Files

- Use the `close` member function:

```
infile.close();
outfile.close();
```
- Don't wait for operating system to close files at program end:
 - may be limit on number of open files
 - may be buffered output data waiting to send to file

Addison-Wesley
Learning Technology

PEARSON

Copyright © 2015, 2012, 2009 Pearson Education, Inc., Publishing as Addison-Wesley. All rights reserved.

Letting the User Specify a Filename

- In many cases, you will want the user to specify the name of a file for the program to open.
- In C++ 11, you can pass a `string` object as an argument to a file stream object's `open` member function.

Addison-Wesley
Learning Technology

PEARSON

Letting the User Specify a Filename in Program 5-24

Program 5-24

```
1 // This program lets the user enter a filename.
2 #include <iostream>
3 #include <string>
4 #include <fstream>
5 using namespace std;
6
7 int main()
8 {
9     ifstream inputFile;
10    string filename;
11    int number;
12
13    // Get the filename from the user.
14    cout << "Enter the filename: ";
15    cin >> filename;
16
17    // Open the file.
18    inputFile.open(filename);
19
20    // If the file successfully opened, process it.
21    if (inputFile)
```

Letting the User Specify a Filename in Program 5-24

```
22 {
23     // Read the numbers from the file and
24     // display them.
25     while (inputFile >> number)
26     {
27         cout << number << endl;
28     }
29
30     // Close the file.
31     inputFile.close();
32 }
33 else
34 {
35     // Display an error message.
36     cout << "Error opening the file.\n";
37 }
38 return 0;
39 }
```

Program Output with Example Input Shown in Bold

```
Enter the filename: ListOfNumbers.txt [Enter]
100
200
300
400
500
600
700
```

Using the `c_str` Member Function in Older Versions of C++

- Prior to C++ 11, the `open` member function requires that you pass the name of the file as a null-terminated string, which is also known as a C-string.
- String literals are stored in memory as null-terminated C-strings, but string objects are not.

Addison-Wesley
Learning Technology

PEARSON

Copyright © 2015, 2012, 2009 Pearson Education, Inc., Publishing as Addison-Wesley. All rights reserved.

Using the `c_str` Member Function in Older Versions of C++

- `string` objects have a member function named `c_str`
 - It returns the contents of the object formatted as a null-terminated C-string.
 - Here is the general format of how you call the `c_str` function:

```
stringObject.c_str()
```

- Line 18 in Program 5-24 could be rewritten in the following manner:

```
inputFile.open(filename.c_str());
```

5.12

Breaking and Continuing a Loop

Addison-Wesley
is an imprint of
PEARSON

Copyright © 2015, 2012, 2009 Pearson Education, Inc., Publishing as Addison-Wesley. All rights reserved.

Breaking Out of a Loop

- Can use `break` to terminate execution of a loop
- Use sparingly if at all – makes code harder to understand and debug
- When used in an inner loop, terminates that loop only and goes back to outer loop

Addison-Wesley
is an imprint of
PEARSON

Copyright © 2015, 2012, 2009 Pearson Education, Inc., Publishing as Addison-Wesley. All rights reserved.

The `continue` Statement

- Can use `continue` to go to end of loop and prepare for next repetition
 - `while`, `do-while` loops: go to test, repeat loop if test passes
 - `for` loop: perform update step, then test, then repeat loop if test passes
- Use sparingly – like `break`, can make program logic hard to follow
