In order to talk about different voting methods, we need to use a preference ballot. On this type of ballot each voter ranks the candidates from 1<sup>st</sup> place to last place. Once all of the ballots are cast, the outcomes are organized in a table called a preference schedule.

I will use one preference schedule to illustrate how different voting methods may result in a different winner.

Example: Members of *Retired People Rock* voted on where to go on their next adventure. They had the following choices: Anchorville (A), Blissfield (B), Cloverdale (C), or Dodgeville (D).

The results are in the preference schedule below.

# of voters	27	19	15	8	2
1 <sup>st</sup> place	B	A	C	D	A
2 <sup>nd</sup> place	D	D	A	C	C
3 <sup>rd</sup> place	A	C	D	A	D
4 <sup>th</sup> place	C	B	B	B	B

### Voting Methods

1. Plurality: the candidate with the most first-place votes wins

Solution for our example:

$$A = 19 + 2 = 21$$

$$B = 27$$

$$C = 15$$

$$D = 8$$

In our example the winner by plurality is B.

2. Plurality with elimination: a simple majority (over 50% of the votes) is needed to win

How plurality-with-elimination works

Round 1:

- a) Count the number of 1<sup>st</sup>-place votes for each candidate.
- b) Does any candidate have a majority of the 1<sup>st</sup>-place votes?
  - i) If “yes”, we have a winner.
  - ii) If “no”, eliminate the candidate with the fewest 1<sup>st</sup>-place votes and go to round 2.

Round 2:

- a) From the preference schedule, cross out the candidate who was eliminated in round 1.
- b) Transfer the votes of the eliminated candidate to the next eligible candidate on the ballot.
- c) Proceed as in round 1.

Round 3, 4, . . .: Follow the procedure for round 2 until there is a candidate with a majority of the votes.

# of voters	27	19	15	8	2
1 <sup>st</sup> place	B	A	C	D	A
2 <sup>nd</sup> place	D	D	A	C	C
3 <sup>rd</sup> place	A	C	D	A	D
4 <sup>th</sup> place	C	B	B	B	B

Solution for our example:

Total votes =  $27 + 19 + 15 + 8 + 2 = 71$ . Minimum for majority = 36.

Round 1

$A = 19 + 2 = 21$

$B = 27$

$C = 15$

$D = 8$

no majority

eliminate D

Round 2

$A = 19 + 2 = 21$

$B = 27$

$C = 15 + 8 = 23$

no majority

eliminate A

Round 3

$B = 27$

$C = 19 + 15 + 8 + 2 = 44$

majority for C

In our example the winner by plurality with elimination is C.

3. Borda Count: points are given for 1<sup>st</sup> place, 2<sup>nd</sup> place, and so on

How Borda count works

- a) There are N candidates ranked on a preference schedule
- b) A 1<sup>st</sup>-place vote gets N points; 2<sup>nd</sup>-place gets N – 1 points; last place gets 1 point.
- c) Points for each candidate are totaled.
- d) The candidate with the most points is the winner.

# of voters	27	19	15	8	2
1 <sup>st</sup> place	B	A	C	D	A
2 <sup>nd</sup> place	D	D	A	C	C
3 <sup>rd</sup> place	A	C	D	A	D
4 <sup>th</sup> place	C	B	B	B	B

Solution for our example:

Candidate	A	B	C	D
1 <sup>st</sup> place	4(21) = 84	4(27) = 108	4(15) = 60	4(8) = 32
2 <sup>nd</sup> place	3(15) = 45	3(0) = 0	3(10) = 30	3(46) = 138
3 <sup>rd</sup> place	2(35) = 70	2(0) = 0	2(19) = 38	2(17) = 34
4 <sup>th</sup> place	1(0) = 0	1(44) = 44	1(27) = 27	1(0) = 0
Total	199	152	155	204

In our example the winner is by Borda count is D.

4. Pairwise Comparison: every candidate goes head-to head against every other candidate

For N candidates, there are  $\frac{N(N-1)}{2}$  pairs to compare.

How pairwise comparison works

- a) Voters rank all the candidates.
- b) Every candidate goes head-to-head one time against every other candidate.
- c) For each pair of candidates (say A and B), determine how many voters prefer A over B.
- d) The winner of the pair gets 1 point. If it is a tie, each candidate in the pair gets ½ point.
- e) After all pairs are evaluated, total each candidate’s points.
- f) The candidate with the most points after all pairs are evaluated wins.

# of voters	27	19	15	8	2
1 <sup>st</sup> place	B	A	C	D	A
2 <sup>nd</sup> place	D	D	A	C	C
3 <sup>rd</sup> place	A	C	D	A	D
4 <sup>th</sup> place	C	B	B	B	B

Solution for our example:

<u>A vs B</u>	<u>A vs C</u>	<u>A vs D</u>	<u>B vs C</u>	<u>B vs D</u>	<u>C vs D</u>
19 27	27 15	19 27	27 19	27 19	15 27
15	19 <u>+8</u>	15 <u>+8</u>	15	15	<u>+2</u> 19
8	<u>+2</u> 23	<u>+2</u> 35	8	8	17 <u>+8</u>
<u>+2</u>	48	36	<u>+2</u>	<u>+2</u>	54
44			44	44	

Total points: A = 3      B = 0      C = 1      D = 2

In our example the winner by pairwise comparison is A.

A summary of the results:

Voting method	Plurality	Plurality with Elimination	Borda Count	Pairwise Comparison
1 <sup>st</sup> place	B	C	D	A
2 <sup>nd</sup> place	A	B	A	D
3 <sup>rd</sup> place	C	A	C	C
4 <sup>th</sup> place	D	D	B	B

Where are these methods used?

1. Plurality: student council elections; general elections in many cities
2. Plurality with Elimination: political office in Australia, Canada, Ireland, and New Zealand;  
Best Picture for the Academy Awards
3. Borda Count: Heisman Trophy in football
4. Pairwise Comparison: selection of draft choices for a team in the NFL
